BACKGROUND

Informatics student at Universitas Multimedia Nusantara with a broad passion for software engineering and technology. Experienced in building end-to-end applications, working with various databases, and exploring different areas of software development. I enjoy taking complex ideas and translating them into functional products through hands-on projects.

EDUCATION

B.Sc. in Informatics, Universitas Multimedia Nusantara

2024 - Present

- Experienced in fullstack development, and server management.

Science Major, St. Paskalis Senior High School

2021 - 2024

- Graduated with a Science major, demonstrating excelling in academics

PROJECTS & EXPERIENCES

Agriculture E-Commerce Platform Garuda Hacks 7.0

- Built a direct-to-consumer digital marketplace designed to connect local farmers directly with consumers, cutting out intermediaries.
- Engineered the core catalog browsing, product filtering, and transaction flows using React and modern JavaScript.
- Designed intuitive UI components to streamline checkout and communication between agricultural suppliers and buyers.

Tech stack: React, Javascript

Web-Based Games

- Developed a 2D browser-based RPG engine inspired by classic top-down adventure mechanics using React and JavaScript.
- Implemented core game loops, coordinate-based grid movement, and collision handling.
- Managed dynamic UI overlays for health gauges, player inventories, and interaction dialogs directly inside the DOM.

Tech stack: React, Javascript

Fit N Full Online Food Ordering Web

- Developed an end-to-end full-stack web application for a food startup to manage online ordering and daily operations.
- Implemented backend business logic and RESTful endpoints using Node.js, integrating a MySQL relational database for menu and order management.
- Built responsive customer interfaces for product browsing, cart handling, and automated order placement.
- Configured and deployed the application onto a remote Virtual Private Server (VPS).

Tech stack: HTML, JavaScript, Node.js, MySQL

Person In Charge UMNPC Gen XIII**October 2025 - July 2026**

- Directed club activities and weekly training sessions focused on data structures, algorithms, and competitive programming problem-solving.
- Coordinated internal practice contests and mentored members preparing for regional competitive programming competitions.
- Managed administrative operations, member communication, and cross-division collaboration for club events.

SKILLS

Languages: Native Bahasa Indonesia, Proficient English**Programming Languages:** C/C++, Javascript, PHP, Kotlin, SQL**Frameworks:** React, Node.js, Express.js, Next.js**Database:** MySQL, MongoDB**Tools & Technologies:** Git, Postman, REST API, Linux
